Booksy Innovation Day: Looker

Mark Rittman, CEO, Rittman Analytics
Alex Caldwell, Consultant, Rittman Analytics

Google Cloud Partner

Introductions

Rittman Analytics

- Boutique analytics consultancy based in Brighton, UK
- Full-stack agile analytics consulting focused on the modern data stack
- We kick-start and modernise your data strategy, data team and data platform
- Partners with Google Cloud, dbt Labs, Cube, Snowflake, Dagster, Rudderstack etc.
- Find out more at rittmananalytics.com

Mark Rittman & Alex Caldwell

- CEO and Consultant at Rittman Analytics
- 25+ years of experience working on BI, DW and now AI projects
- Alex is lead developer on the Booksy Looker implementation

We make your data analytics vision a reality.

Rittman Analytics is a Google Cloud Partner that specialises in Data Analytics, Data Management and Artificial Intelligence

Our services transform customer experiences, increase efficiency and create actionable insights, making your Google Cloud vision a reality.

What we will cover today

1. Where we are now
2. What's next (in the delivery pipeline)
3. What's now possible - Conversational Analytics, Gemini Enterprise + Looker
4. Where can this all go - How I use Looker, AI and Agents to run Rittman Analytics

rittman analytics

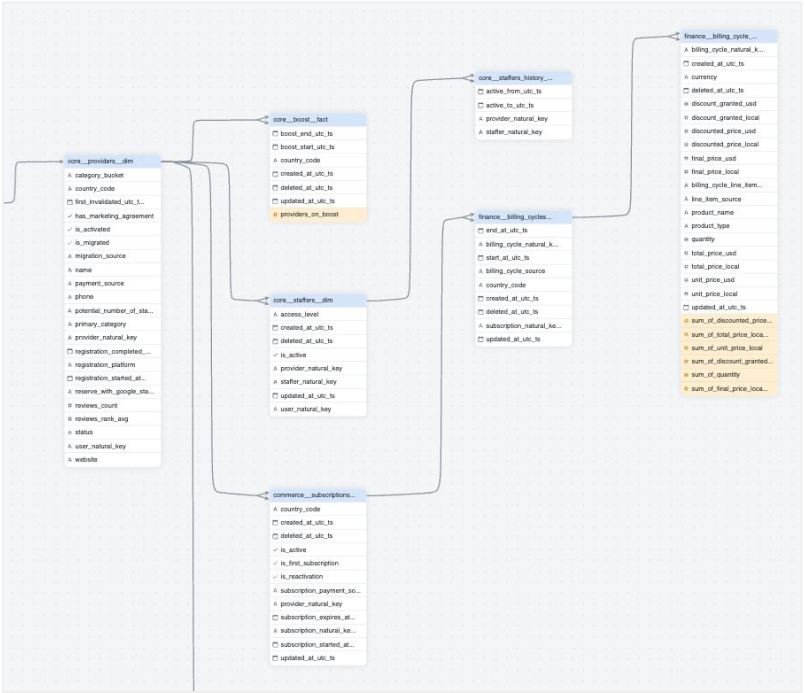

Where We Are Now

Where We Are - BigQuery + dbt

Building the Foundation

One place for every number that matters

- **All your data in one place** - Provider transactions, subscriptions, payments, app store data, users - pulled together from multiple source systems into a single warehouse. No more stitching together exports from different platforms to get a complete picture.
- **Consistency** - Revenue, churn, provider count; each metric is defined once and used everywhere. No more reconciling different versions from different teams.

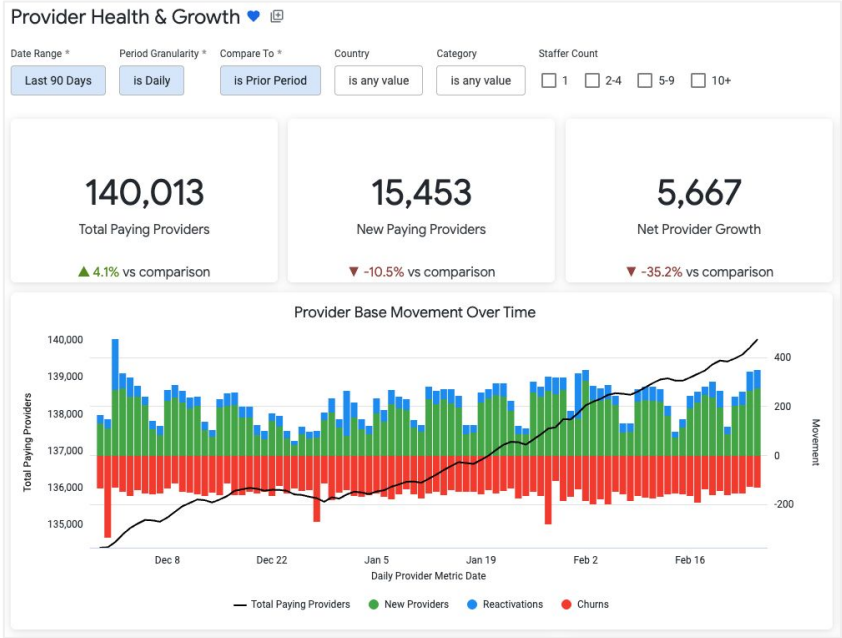

© Rittman Analytics 2024 T: +44 (0)208 058 5951 W: https://rittmananalytics.com E: info@rittmananalytics.com

rittman analytics

Building the Foundation

One place for every number that matters

- **Built for flexibility** - The aim of Looker is to build a model that can answer any question that comes up. Adding a dimension, a time comparison, or a new data source extends what's already there.
- **Foundation for everything else** - Dashboards, self-service analysis, and the AI capabilities we'll show later all sit on top of this same foundation.

© Rittman Analytics 2024 T: +44 (0)208 058 5951 W: https://rittmananalytics.com E: info@rittmananalytics.com

rittman analytics

The PDM

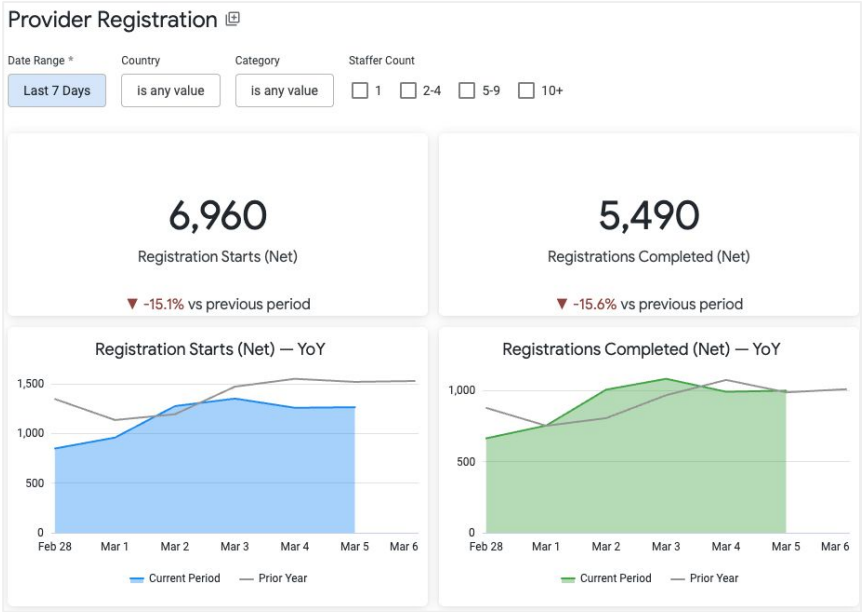

- **Physical data model** - shows how entities are connected to each other and what they contain
- **Designed without redundancy** - there won't be duplicated tables, or the same column repeated in different places
- **Top-down approach** - by understanding the business' needs and uses for data, we work backwards to ensure the final structure supports corporate objectives

rittman analytics

The Impact

- Provider Health & Growth dashboard is built using immutable data, no more shifting after the fact
- Registration, churn & activation metrics are defined, and now using billing cycles. This unlocks connections to revenue, and deeper understanding of business
- Simplification - we are moving from 37 churn reports to 1. Dashboards and reports with overlap are being reviewed, and redundancy removed

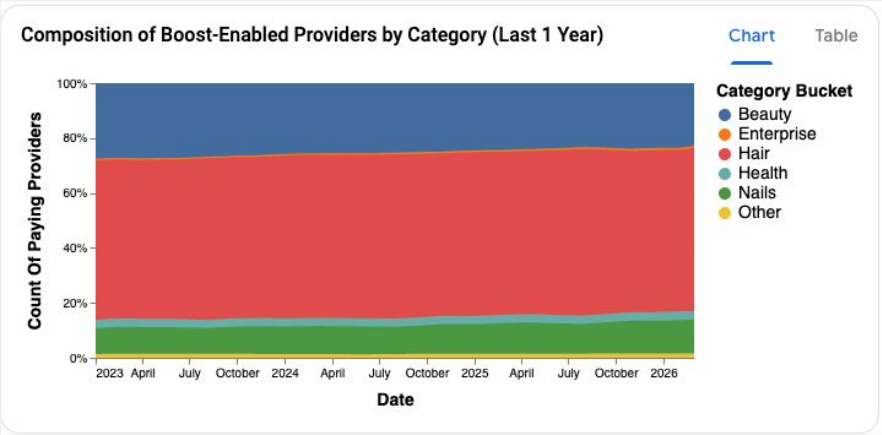

© Rittman Analytics 2024 T: +44 (0)208 058 5951 W: https://rittmananalytics.com E: info@rittmananalytics.com

rittman analytics

Where we are

The Impact

- Unifying provider revenue, with all SaaS channels available together
- Redefined LookML authoring process, with generative AI as standard

- This is the groundwork. Gemini Enterprise can connect to your warehouse, allowing context-based conversations with your data. Move beyond knowing what happened; understand why and what you can do about it

What's next

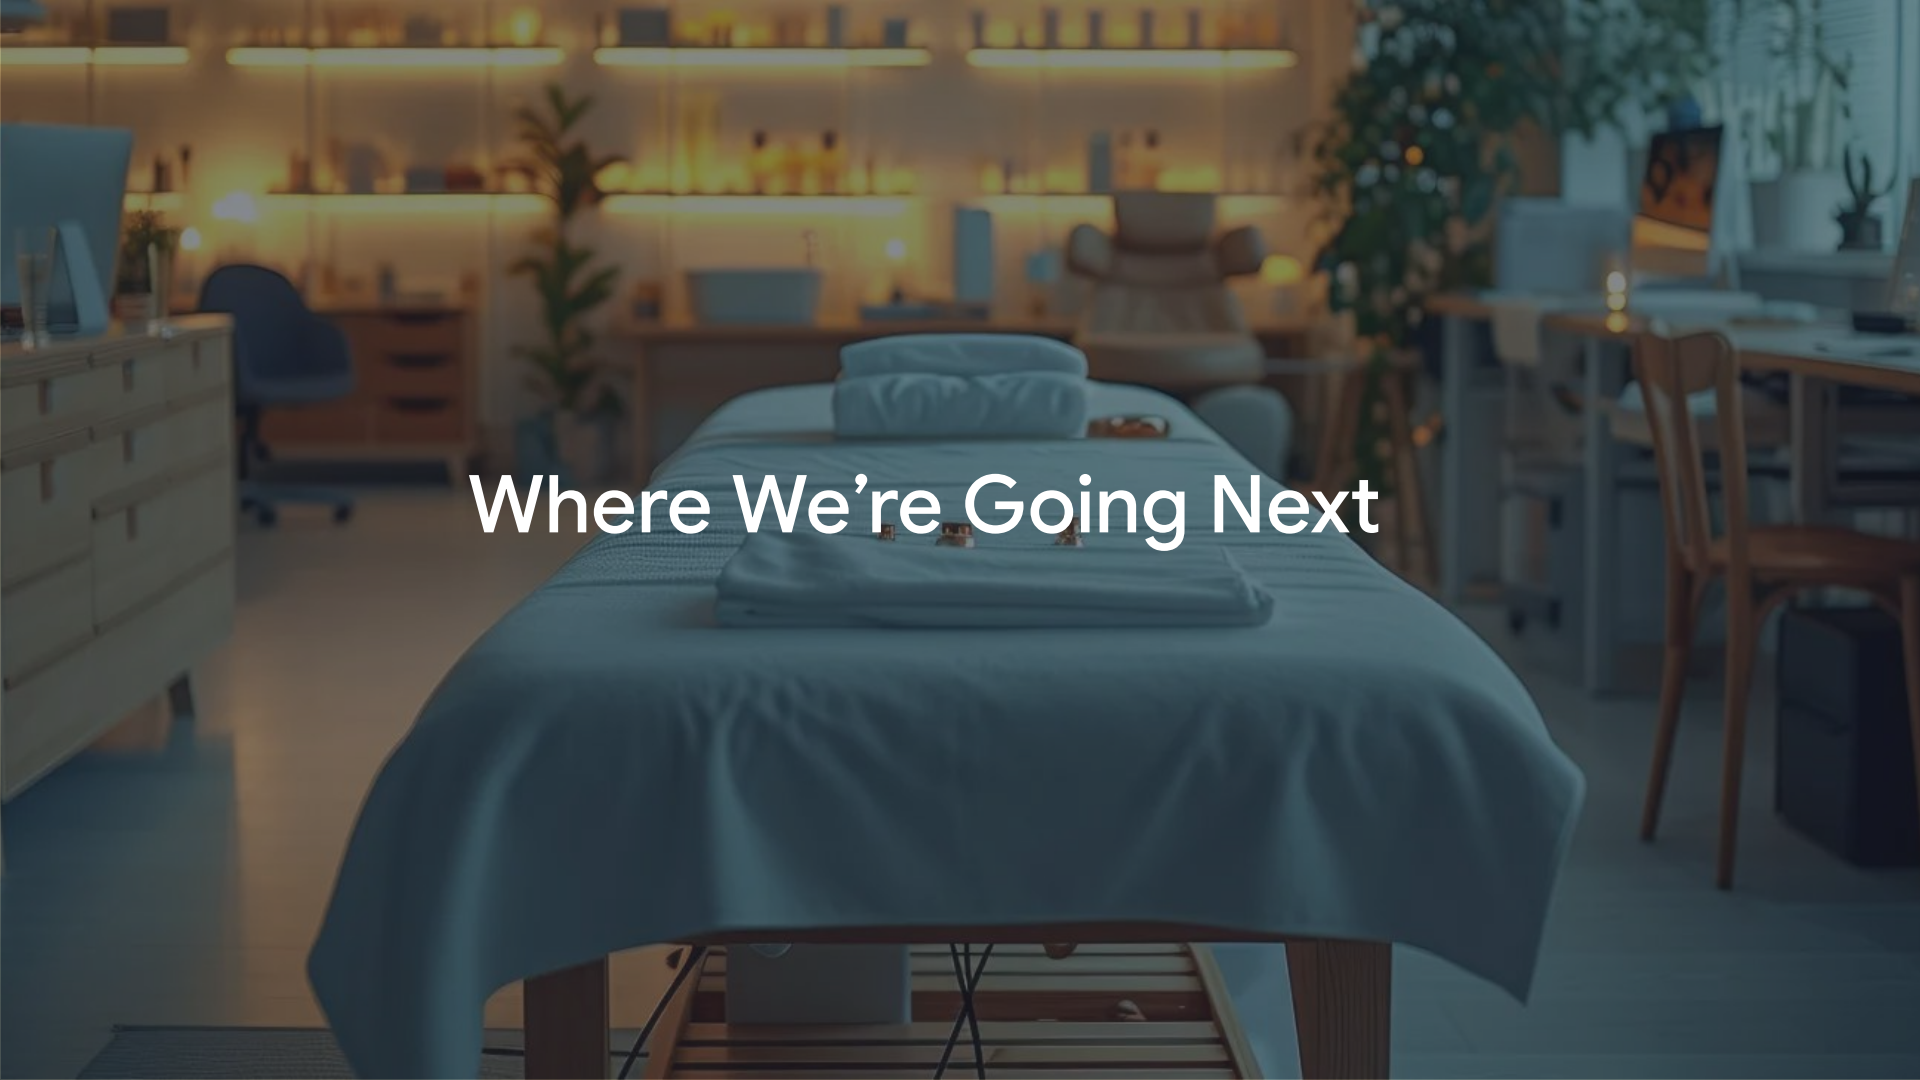

Building Together

More than dashboards - a platform that compounds in value

- **Governed data warehouse** - every metric defined once, tested automatically, consistent across the business.
- **Semantic layer** - translating raw data into business concepts that any tool, team, or AI capability can read.
- **Dashboards** - Provider Health & Growth running on real data, with drill-downs across country, category, and provider segment.
- **Capability transfer underway** - your teams will transition to the tools, the schema, and the development workflow.

rittman analytics

Where We’re Going Next

What's next

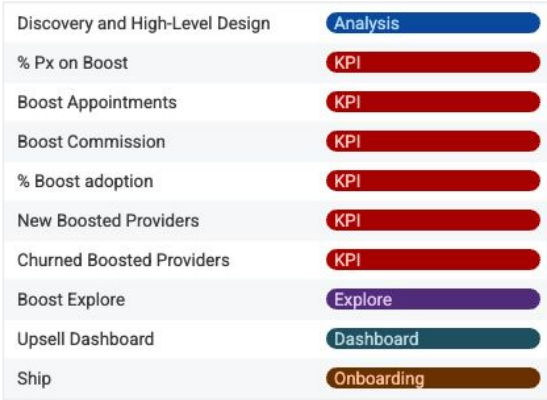

Roadmap - Building on our Foundations

Remaining Q1 and through Q2:

- **Provider revenue**
  - Expanding entities for Saas, Boost & Payments
  - First iteration of dashboard in next sprint
- **Provider lifecycle**
  - PRC metrics built, dashboards are next
- **Upsell on Boost**
  - This focus area is in discovery, with metric and KPI definitions being the first element
  - A new explore will follow, which drives a further dashboard

Beyond

- Marketing attribution
- Product analytics
- Further team enablement
- Expand Gemini in Looker

© Rittman Analytics 2024 T: +44 (0)208 058 5951 W: https://rittmananalytics.com E: info@rittmananalytics.com

rittman analytics

What Else Is Now Possible?

Art of the Possible

- Everything we've shown you so far was the prerequisite. The governed warehouse, the business logic, the semantic layer - they weren't just about better dashboards. They're the reason the next set of capabilities actually work.

- The semantic layer is the difference. AI querying raw tables guesses definitions. AI querying your semantic layer knows what "churn" means, how "ARPP" is calculated, and which joins to use. That's why these aren't hypothetical - they're production-ready features built on the platform you already have.

rittman analytics

Conversational Analytics Demo

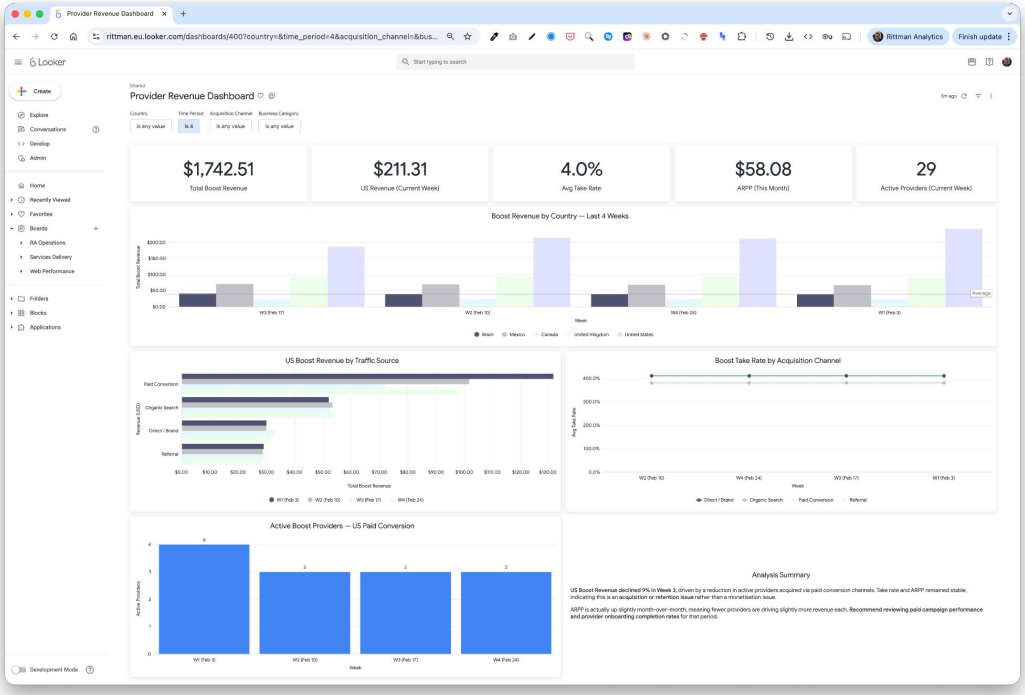

- Demo build on simulated Boost Revenue data, and running on Rittman Analytics' Looker instance
- Dataset that contains key metrics:
  - Sum Boost Revenue
  - Sum GMV
  - Count of Transactions
  - Count of Providers
  - Take Rate %
- And key dimensions
  - Providers
  - Countries
  - Time

© Rittman Analytics 2024 T: +44 (0)208 058 5951 W: https://rittmananalytics.com E: info@rittmananalytics.com

rittman analytics

Starting Point - Boost Revenue Dashboard

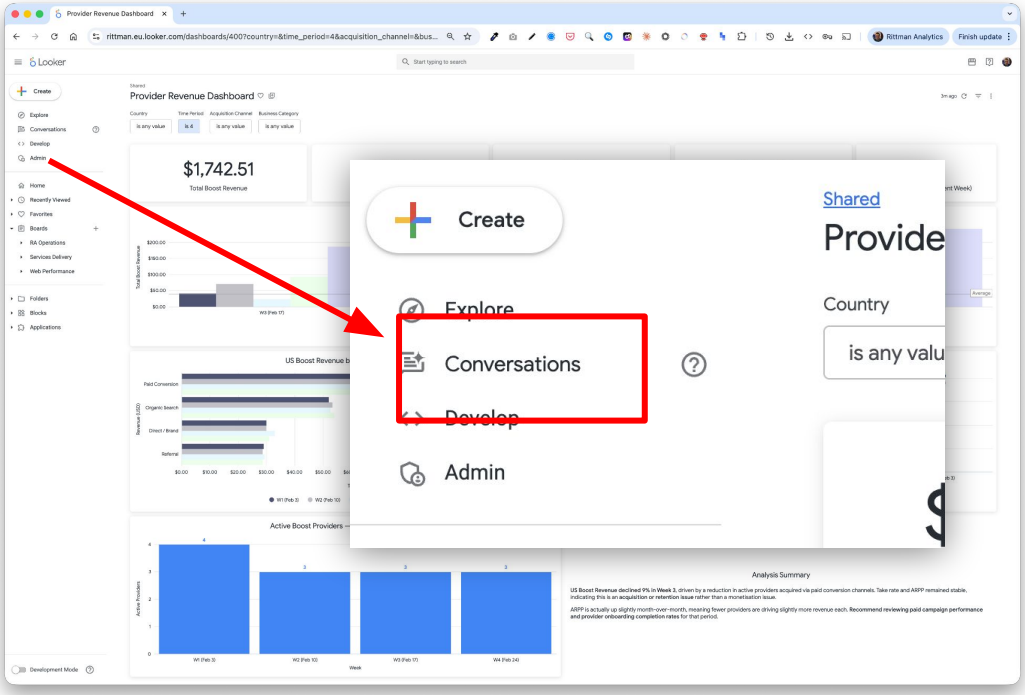

- Mockup of potential future Booksy Boost Revenue dashboard
- Provides single place to view key KPIs, metrics, trends at summary-level
- Launchpad for more detailed provider and country-level analysis using “Explore from Here”

Provider Boost Revenue - Scenario

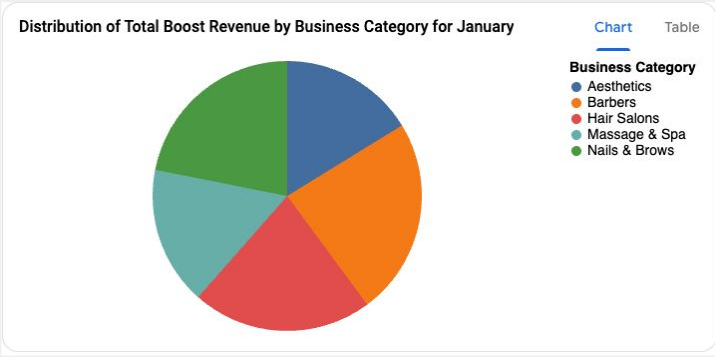

- Imagine an analyst, looking at the WBR revenue dashboard, that notices some anomalies.
- They converse with the dedicated Looker agent, tailored for this situation, and directly connected to the data that drives the dashboard.
- They can deep dive into the data, without needing to understand SQL or LookML queries, and ask the questions they want to ask.

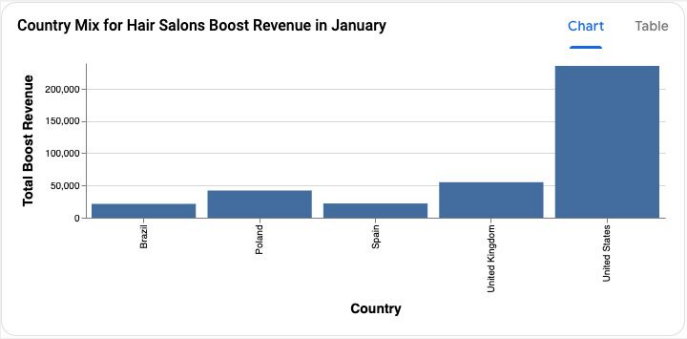

rittman analytics

Provider Boost Revenue - Scenario

- They have follow-up questions; they want to slice by country, compare different
- The agent can pull data, build charts and write reports
- Context is remembered, so if something urgent comes up, you can jump back in, or run multiple investigations in parallel
- Anything you're not sure about? The "Show Reasoning" button will give a breakdown of the process used - so there is always an audit trail

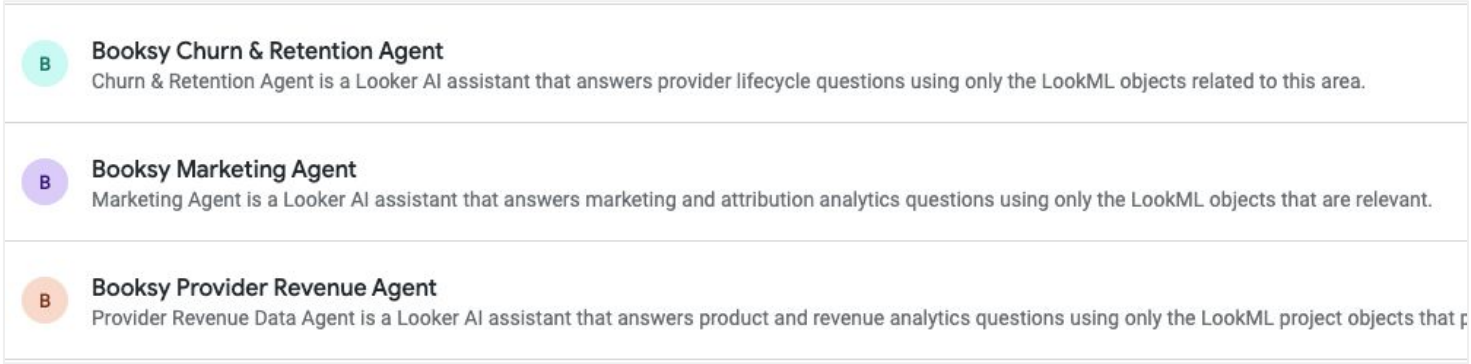

© Rittman Analytics 2024 T: +44 (0)208 058 5951 W: https://rittmananalytics.com E: info@rittmananalytics.com

rittman analytics

Demo: Looker Conversational Analytics

Provider Boost Revenue - Scenario

- Bespoke agents, with specialisms and access to the data that matters
- Shareable, so teams can work with the same tools - not building their own versions of reports
- Answers in minutes, no more waiting for queries to be built. Anyone can investigate a question, drill into the detail, and get a summary ready - all in one conversation

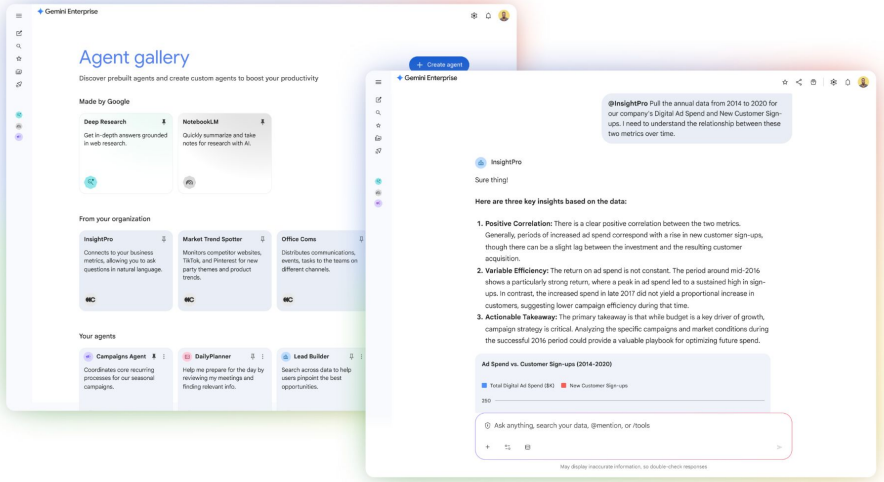

rittman analytics

Going from “What Happened”
to “Why” and “What do I do Next?”

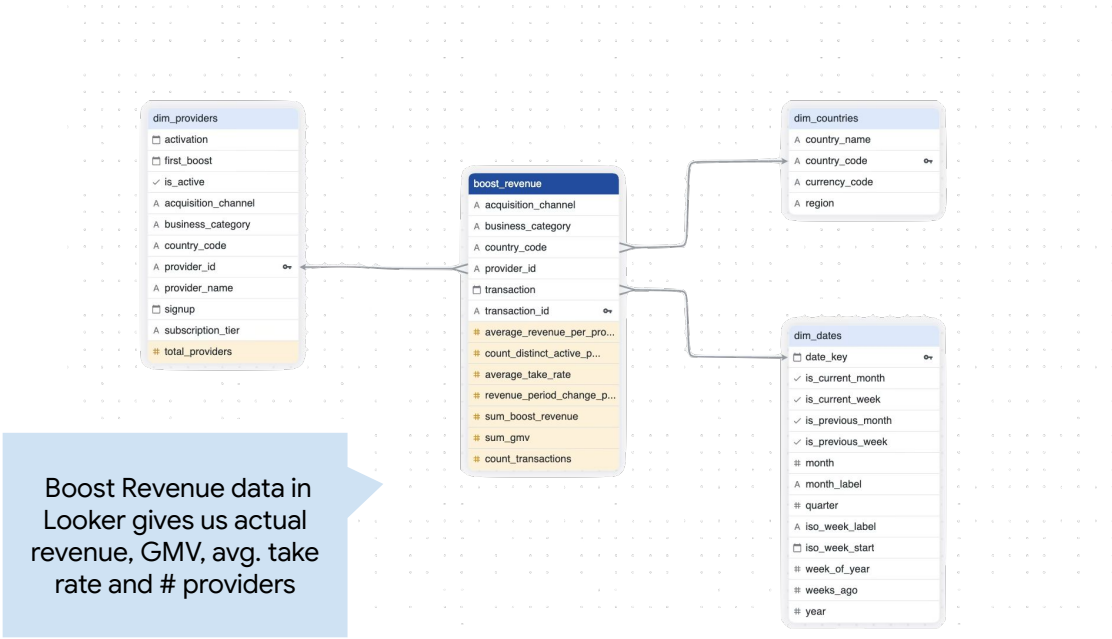

Gemini Enterprise

- Gemini Enterprise is Google's enterprise search, AI assistant and agentic workflow platform also being implemented at Booksy
- Connects to Looker's semantic Layer, same as Conversational Analytics, to enable you to query Booksy data using natural language questions
- But also gives you the ability to bring-in additional data and context, e.g.
  - Data and insights from agents
  - Data from other SaaS apps
  - Documents and files from Google Drive, direct uploads
  - and more

Revenue Budget & Targets

December 2025 - June 2026

Last Updated: February 28, 2026 | Owner: Finance & Product Strategy | Review Cycle: Monthly

Revenue Budget by Market

White rows represent actuals from the Boost Revenue analytics model. Yellow rows represent forward-looking budget targets approved in the January 2026 planning cycle. All figures in USD.

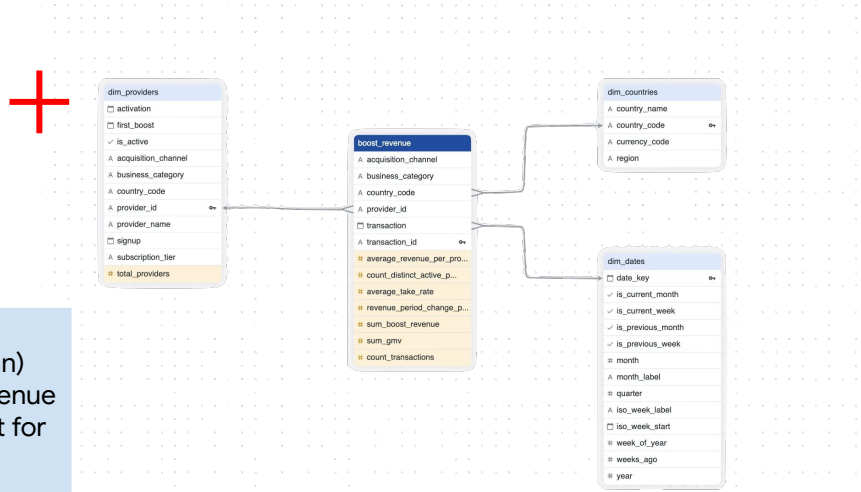

Month	UK	UAE	Poland	Brazil	Spain	Total	Status
Dec 2025	$524,462	$348,000	$208,000	$130,000	$87,000	$1,748,962	Actual
Jan 2026	$553,638	$334,000	$248,000	$143,000	$92,000	$1,741,638	Actual
Feb 2026	$554,510	$362,000	$275,000	$158,000	$92,000	$1,742,510	Actual
Mar 2026	$690,000	$375,000	$290,000	$170,000	$100,000	$1,915,000	Budget
Apr 2026	$1,050,000	$390,000	$310,000	$180,000	$110,000	$2,050,000	Budget
May 2026	$1,180,000	$420,000	$330,000	$200,000	$130,000	$2,180,000	Budget
Jun 2026	$1,350,000	$450,000	$360,000	$220,000	$135,000	$2,365,000	Budget

Variance Analysis (Feb 2026)

February actuals show the US underperforming the internal run-rate by approximately 8%, driven by a dip in Paid Conversion provider activity during weeks 2-3. The UK and Poland both outperformed expectations, with UK Boost revenue increasing 8.7% month-over-month. Brazil showed steady growth with the addition of one new Boost provider (Estética Avançada). Spain remains the smallest market but is growing consistently.

Key concern: US Active Providers dropped from 10 to 9 in weeks 2-4 of February. Investigation suggests one provider (Sharp Cuts, US-006) deactivated Boost temporarily. If confirmed, this accounts for the majority of the US shortfall.

Google Docs

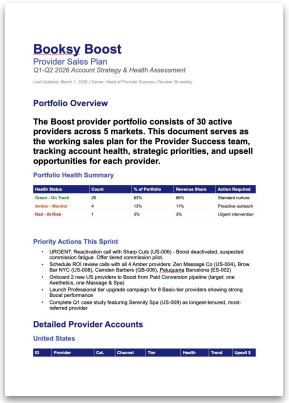

But we also have budget (plan) data and targets for Boost Revenue in a Google Doc - let's add that for actuals vs. budget

rittman analytics

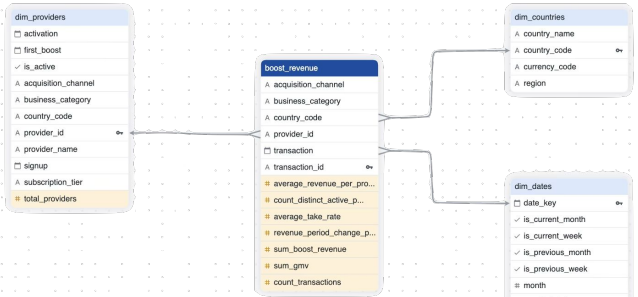

Demo Scenario : Analyzing Boost Revenue vs. Plan

+

Google Docs

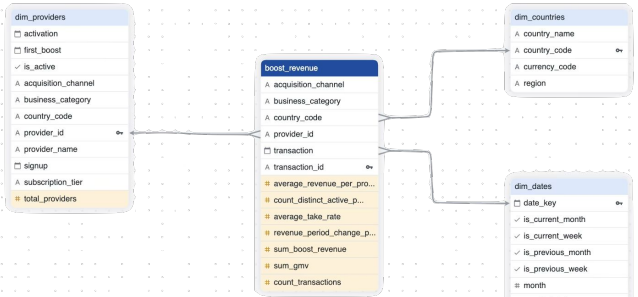

Our sales plan would let us compare provider acquisition vs. sales target

Demo Scenario : Analyzing Boost Revenue vs. Plan

Google Docs

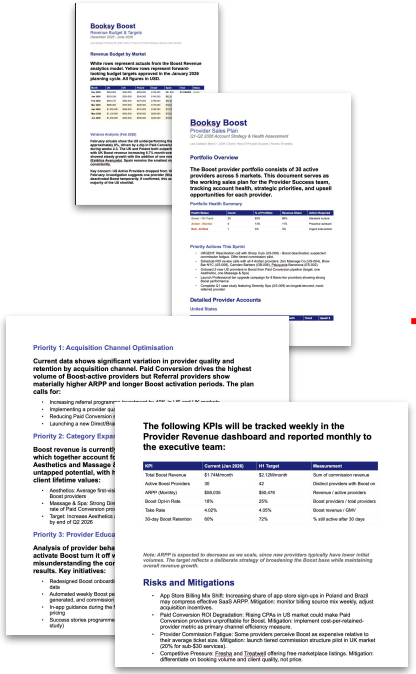

Adding the Boost Revenue business plan gives us product strategy + product KPIs

How I use AI, Agents + Looker Today

Real-World Examples of How I Use This Today

1. Use an agent to summarise what's important today sourced from Slack, Fathom, Email, Calender
2. Report on what the team was up-to-last week, and their AI adoption, sourced from Slack, Fathom, Jira, Confluence, Github
3. Analyze our sales strategy based on win-rates across our customer segments
4. Analyze the Booksy Looker implementation using data from Looker, Fathom, Slack, Jira
5. Do a deep-dive into our team's interactions with the Booksy team using Looker, Fathom, Google Docs, Slack, Jira
6. Run a delivery impact assessment for the Booksy engagement using the Github documentation for our Wire Framework and the sources used for (3) and (4)m
